# Technology

| Mobile and Fixed Site Data Use Assessment for Incidents and Planned Events (BRBEVNTASMT) | |
|---|---|
| TA Delivery Method: | In-Person Workshop or Webinar |
| Recommended Participants: | SWICs and Public Safety Personnel |

## Offering Overview

In this service offering, CISA will conduct an analysis of a state, local area, or individual agency's use of mobile data devices and applications during a planned event or following a real-world incident. This information is critical to understanding the current requirements for use of commercial mobile data networks and technologies during incident response and may assist the state in implementing FirstNet. The requesting agency will receive an after action report (AAR) that includes an improvement plan (IP) with technical and operational recommendations.

**Customized support for this offering may vary to meet each state's unique needs. Potential design options, outcomes, and deliverables may include:**

- Accountability for participating agencies and number/types of devices
- Procedures for data coordination and prioritization
- Undetermined peak and total data usage requirements
- After action report
- Analysis and interpretation of data results
- Geographic Information System (GIS)
- GIS mapping of mobile data usage
- Recommendations/IP
